

Keep Surfaces Clean to Kill COVID 19

Coronavirus disease 2019 (COVID 19) can spread through shared surfaces. Be sure to clean and disinfect objects regularly to limit the spread of germs

What should I disinfect?

Disinfect anything people regularly touch. Examples include door handles, toilets, desks, light switches, computer mice and arm rests.

How should I disinfect?

Cleaning products such as detergents and bleach solutions are the most effective in getting rid of coronaviruses. Read all product labels for more information on proper use.
